

Ujima Suites Care4Me Ujima Consultants, 2003

A Personal Care Management Information System

This application is used to track, record and manage personal client care and family support information. **Care4Me** tracks dependent client attributes statistics factors and provides reports and graphs regarding service frequency. The **Care4Me** application is used to provide client assessment for dependent care facilities, home-care service reports. The program generates a standard client contract agreement. The application allows multiple client activity category editing. Services can be recorded against individual or group client bases. Client attitudinal concerns and long-term settlement issues can be maintained. Details can be created and tracked on multiple client category tabs focused on various data elements.

In-Take Screen Tabs

The client entry screen changes to allow for tabs that provide faster access for user. The Intake screen tabs allow for **Care4Me** to have several quick client usage reports and issuance a standard contract. There is also a tab to record Client diet requirements. This Intake screen also allows the agency to make a clickable count of the services received by the client.

Client Care Grouping

The application allows the user agency to maintain quality information on service care-group activities and care service usage. All clients in a particular care group or activity can be treated as a group for recording service activities. Staff tasks can be recorded against activities for billing purposes.

Hot Meals services

The Hot Meals Module is used to collect, track and edit data into reports for facilities or providers that served on-site meals to client. The application has client setup for special meals, along with food type estimating and meal tracking. Meal tracking can be by breakfast, lunch, dinner and snacks. Food items can be setup to estimate USFDA daily requirements or use some other standard.

Administration and Reports

Staff tasks can be recorded against activities for billing purposes. System Administrator can make global category changes and control user access at different levels. Access for printing can be limited and various client-warning notices can be set. Staff job reports can be compiled for management. This application offers multiple users reporting and executive graphs. Application can be accessed over a network or from a remote site. The database functionality is compatible with NetMeeting capabilities.

UjimaSuites Version Integration

Care4Me application works well with other **UjimaSuites** packages such as the **Case Management** application for registering clients and taking history and medical background. The application can also be used with the **Children-In-Crisis (CIC)** database for documenting necessary infant/youth mandated foster care or for Crisis Referral for client call and referral centers.

UjimaSuites Support

The **FORUM** member agencies and professional practitioners have reviewed the **Care4Me** application. These members help to provide some of the distribution task requirements and sample data. The sample data is based on specific evaluation usage of the application, as an internal with ongoing tracking needs. All names have been changed to protect client confidentiality.

Care4Me is a **Ujima Consultants** copyright application available as a CD release. **Care4Me** is recommended for organization needing to track client personal care service activities for multiple guardians and funding sources. **Care4Me** can be used for agencies with emergency or disaster compounds, seniors' centers, home-care service providers and last-term care facilities.
